

Eos Family Fixture Library

Version 3.3.6.9

A fixture library patch is available for the Eos Family 3.3.6 release that updates the library with the requests specifically mentioned below. This library patch has NOT had any significant testing. We recommend someone spend some time reviewing the fixture definition before beginning programming.

NOTE: This fixture library should only be installed with Eos Family 3.3.0 software or newer.

Instructions

Locate and download the file called "Fixture Library Update v3.3.6 Build 9 for Eos Family" from the software downloads page of any Eos family product. This downloads a zip file that includes the library patch and a list of all fixture profiles in the library as of this latest patch. This file installs exactly as a software update does (see below if you are not familiar with the process).

Put the file directly on a flash drive and follow these instructions:

1. Insert the USB device containing the library into an available USB port on the console.
2. Open the Eos Configuration Utility (also known as the shell) either by exiting the Eos Family software (Browser>Exit) or by starting up the console and clicking on the {Launching in...} button. The ECU screen will open.
3. Click on the {Settings} button.
4. Click on the {General} button inside of the settings window.
5. Scroll down until the {Software Update} button is visible onscreen. Click this button.
6. When the "Update Software" dialog appears, click on "Eos_FixtureLib_3.3.6.9.zip", then {Install}.
7. When prompted, click [Yes] to confirm that you want to install the Eos support files and continue to follow onscreen prompts through the installation process.

All library changes since Eos 3.3.0 released are included in this library patch.

A full list of the fixture library contents can be found in the "FixtureList.html" file included in the library download.

The following profiles are new or modified in this library patch

Added:

- AML Lighting
 - 550W BSW MHL
 - LED 800W Profile
- Algam Lighting
 - MH200
